

Free Up Resources to Focus on New Business Innovation and Software Development

Leveraging an experienced IT infrastructure service provider like Verio, off-loads the time, resources, and attention to non-core business functions.

10 Key Benefits of Outsourcing Your IT Infrastructure or SaaS Platform with Verio:

1) Leverage the Financial Strength and Reliability of a Profitable Company

Verio has been providing award-winning hosting solutions since 1996, and is backed by the financial strength of NTT Communications. As a wholly owned subsidiary, Verio is the SMB-focused business arm of NTT Communications, one of the world's largest telecommunications companies. This financial strength, proven expertise and global footprint in nearly 200 countries, makes Verio uniquely positioned to service the needs of software companies worldwide, now and in the future.

2) By-Pass Startup Costs and Get a Robust and Economical IT Infrastructure

Building the IT infrastructure to support your application can be very costly when you factor in hardware and software costs, knowledgeable staff, environmentally controlled facilities and daily maintenance, let alone setting up an Internet backbone that ensures reliability and uptime for your customers. Choosing to outsource with Verio means these headaches are not an issue. We've already made the investments in the latest technology, global internet backbone, premier network operations centers and the highest trained engineers in the business. You instantly benefit from our economies of scale and expertise to receive enterprise-class technology solutions at a very affordable price.

3) Get Guaranteed Uptime from Enterprise-class Technology

Verio backs all its server solutions with industry-leading Service Level Agreements. But we know a piece of paper is not enough. We perform frequent analysis of technology, equipment, and suppliers to ensure we have the highest-grade hardware and software to support the demanding technology infrastructure requirements of leading software companies. Plus Verio's server solutions reside on NTT Communications' owned and operated, world-class tier 1, global infrastructure for optimal reliability and performance. This infrastructure spans four continents including North America, Europe, Asia and Australia.

4) Utilize Our Experience, Trained IT Expertise and Support

Verio is an expert in providing managed hosted solutions for SMB software companies including independent software vendors, as well as Managed Service Providers, Web Developers, and IT Consultant organizations. You pick the level of management you desire for your servers – either managed private server with OS updates, server software patches and upgrades, basic security tasks and backups. Or choose unmanaged dedicated server with full control over your IT environment plus guaranteed network uptime, security and performance from Verio. Then layer our Managed Services onto your solution for even more customized support.

5) Focus on Your Core Competency

While you understand your application, you may not be an expert in server technology and maintenance. You can leverage our expertise in server management, administration, and IT infrastructure to free up your time and resources, allowing you to focus on business innovation and software development.

6) Retain Control of Your Applications

Verio supplies, monitors, and manages the platform or infrastructure that houses your applications. You retain complete control of your applications that reside on our solutions.

7) Speed Up Your Time to Market

Researching IT vendors and platforms takes time and resources, and setting it up and testing it all takes even more. By outsourcing your IT infrastructure with Verio, you get a highly reliable platform with the computing power you need to deliver your software services to market more quickly.

8) Scale Quickly and Easily as Your Business Grows

As your business grows and you add more end-user subscribers, your bandwidth requirements also grow, Verio enables you to quickly add additional server capacity and computing power within minutes, not days or weeks.

9) Reduce IT and Business Risk with Triple Data Backup, System and Security Monitoring

Verio provides the industry's strongest SLAs to back up our performance levels, and invests in the latest technology to provide the highest level of performance to ensure your application is always available. But we understand that that's not enough. So we also deliver continuous system and security monitoring through our Network Operations Centers, plus triple data backup capability with two levels of free backup and an off-server backup managed service.

10) Flexible Solutions to Build Your Platform

Verio offers a wide range of server solutions. So you can select the solution that best meets your specific business requirements. Choose from four different levels of Virtual Private servers and three levels of Managed Private Servers that deliver root access, enhanced security, dedicated resources and a fully managed OS with updates and patches. For even more control over your infrastructure, choose our fully customizable Unmanaged Dedicated Servers. All solutions are available on Microsoft®, Linux and FreeBSD® operating systems.

Choose Verio as Your IT Infrastructure Provider And Get Back to Your Core Business Objectives.
